

We are currently looking for the first of two Chief Engineers for the Smart Mobility Division of Tampa. Our signal system is in the final stages of modernization, we have hundreds of new devices, and a great team leading us as we continue to evolve into a SMARTer city. We are also rapidly increasing our fluency in data analytics and decision making. We are proud to be a Vision Zero City and have already made progress in reducing the number of fatal and serious injury crashes. If you're a traffic engineer who understands how design and operations influence safer traveler behavior, I would like to talk to you about joining our team.

The Smart Mobility Division core services include: Traffic Signal Shop, Traffic Management Center & ITS, Project Delivery & Streetlighting, Right of Way Permitting, and GIS & Data Management. As a team member, you would oversee two or three of these core services based on your skill set.

Please consider this opportunity to put your traffic engineering skills into practice in real-time.
